# Complexity of DLs: Overview of the Complexity of Concept Consistency

We left out a variety of complexity results for

- ⇒ **concept consistency of other DLs**  
(e.g., those with “concrete domains”)
- ⇒ **other standard inferences**  
(e.g., deciding consistency of ABoxes w.r.t. TBoxes)
- ⇒ **“non-standard” inferences such as**
  - matching and unification of concepts
  - rewriting concepts
  - least common subsumer (of a set of concepts)
  - most specific concept (of an ABox individual)
